Description :

- The apparatus consists of a rigid frame containing an insulated pressure vessel (boiler) and an instrumentation and control unit.
- The electrically-heated boiler holds water.
- The boiler includes a special-purpose glass window.
- A pressure relief valve limits the maximum boiler pressure.
- The frame also has extra space for the optional interface.
- As the water temperature increases, so does the pressure in the boiler.
- A transducer and a thermocouple measure the boiler pressure and temperature.
- A digital display shows the values in both SI and traditional units.
- For sound engineering practice a mechanical Bourdon type gauge also displays the pressure.
- It works independent of the electrical supply so the user can always see the pressure in the vessel.
- The electrical heater has a thermostat to limit the maximum heater temperature.
- It allows students to see the internal construction of the vessel, to see the boiling process and to check the water level.
- For safety, the equipment includes high temperature pipe to direct any vented steam away from the working area to a suitable drain.
- The design includes all possible safety and low maintenance features, specially for educational use.

Contact Science Lab for your Educational School Science Lab Equipments. We are best technical educational equipments manufacturers, technical educational equipments manufacturer, technical educational equipments supplier, technical educational instruments, technical educational instruments exporter, technical educational instruments manufacturer, vocational training lab instruments exporter.
